Glove Anatomy

Pick the best gloves for whatever you're doing. Whether you're processing protein or wrangling livestock, use this guide to find the right fit.

Cuffs
There are many different types of cuffs, each with their own benefits, so think about what you will need most: protection, comfort, easy on/off or warmth.

Grips or Dipped
If you have to pick up or handle items all day, a glove with a coating or extra grip features will be ideal. The extra grip patterns will prevent slipping and hand fatigue, while coated or dipped gloves will also provide these benefits and may add some water resistance.

Abrasion Pads and Reinforced Thumb Crotch
Abrasion pads cover frequently used areas with an extra layer for comfort and durability. Reinforced thumb crotches are an extra layer between the thumb and forefinger, providing more toughness.

Leather Gloves
Leather provides the most durability for tough jobs with heavy abrasion.

Cut-Resistant
We offer several cut resistant gloves so you can safely use knives, box cutters, and more. Cut resistance level, rated A1 through A9, is determined by how much weight is required for a straight blade to cut through the material. The more weight it takes, the higher the rating.

**Insulation**
Insulation is based on weight as well as layers of insulation. Multiple layers, including outer shell and lining, can significantly increase warmth.

**Impact Protection**
Impact protection gloves feature dense pads on the back of the hand, knuckles or fingers to help protect you from day-to-day bangs and pinches.

**Water Repellent**
Are you going to come into contact with water, snow or ice? Look for gloves that are waterproof or water-repellent.

**Ergo Fit**
An ergonomic fit means that the glove is pre-curved so you don’t have to work as hard to bend the glove.

---

**DIPPED GLOVES**
RefriWear offers a number of different dips and coatings on gloves to help you tackle a range of jobs and conditions

**PVC**
Great for those with latex allergies. Good abrasion resistance and stronger than latex and nitrile.

*Gloves shown-0412 & 0312 pg. 66

**Silicone**
Less stiff so it offers great dexterity. Extra tacky for added grip.

*Glove shown-0579 pg. 59

**Nitrile**
Super abrasion resistant – less likely to tear or puncture. Stand up well to oil and temperature swings.

* Nitrile Micro Foam is treated to create tiny craters that create added grip in wet and oily conditions.

*Glove shown-0408 pg. 64

**Latex**
Perfect for extreme temperatures and provides the most grip of any coating.

*Gloves shown-2100 pg. 64
